Preworks condition

Stabilising works to Bell Tower

**Client:** City of London Corp.

**Sector:** Places of Worship

**Contract:** 15 weeks

**Completed:** Nov 2019

## Overview

The Gothic style Anglican Church is located at the end of Church Avenue within the City of London Cemetery and Crematorium. This beautiful Grade II listed building is primarily used for burial services and was designed by William Haywood in 1855 with a stunning 61ft (19m) spire. The restoration works included the overhaul of the roof, rainwater goods, external masonry and structural repairs to the bell tower to conserve the architectural, historical significance of the building and improve the weather tightness to limit future decay.

USL completed an extensive programme of restoration works to the stone masonry, roofing, structural and rain-water goods at the Anglican Church at the City of London Cemetery & Crematorium.

## Works Undertaken

The restoration programme included;

- Restoration and repairs to external stone masonry at all elevations.
- Repairs and replacement to rainwater goods.
- Repairs and replacements of missing broken roofing tiles.
- Liquid water proofing to flat roof areas.
- Safety harness system installed.
- Bell tower repairs including works to timber and steel bell frame.

Stone restoration underway

*"One of the most imposing and most influential of the early public cemeteries".*

New carved elements

The City of London Cemetery and Crematorium holds over 150 years of stories, history and heritage in both the grounds and in the Burial and Cremation Registers. Over 500,000 people have been interred here and with 250,000 cremations and the remains from over 30 London Churchyards interred at the site, the figure is fast approaching 1 million.

Masonry repairs

## The Benefit

The restoration received praise on completion for its sensitivity and very high standard of workmanship.
